

Project Management Course (Waterfall Approach) - Part 1

Based on the Project Management Institute's **PMI®** methodology, this course combines the essential elements of Project Management and team leadership. Through this course you will acquire further understanding of the responsibilities of project and project management team and become better prepared to apply this knowledge to the project environment.

Upon completing this course, you will learn about the role of high performance teams in project management, learn about the tools and techniques for developing and strengthening high performance teams and team members, learn about the stages in project cycle, apply best practices to develop competencies and skills in planning and controlling projects to ensure successful outcomes, learn how to monitor project activities and assess progress, learn to communicate proficiently to report project status and performance to stakeholders and contribute to organizational knowledge base.

You will work on your own sample projects in groups and pairs to clearly visualize the framework studied. Case studies, active participation in hands-on team exercises, assigned homework and practical information, tips and quizzes will reinforce the course material learning.

Objectives:

The key objective of this course is to introduce the basic concepts, tools and technics of project management **PMI®** methodology, as well as to give practical insights and technics to successfully conduct projects in real life by:

- defining basic concepts and terminology of project management
- identifying the project management life cycle
- realizing the project management process groups and knowledge areas
- building a business case for project initiation
- defining project scope and stakeholder expectations
- Defining roles and responsibilities for project stakeholders
- building effective WBS, project schedule and budget
- learning preliminary concepts and methods of project costs management and more.

Target audience:

This course is intended for the beginners in project management, including junior project managers, with little or no formal project management training. The course is also appropriate for project team members with some work experience who need to extend their project management knowledge and upgrade practical skills on contemporary methods.

Learning approach:

Presentations, discussions, case studies quizzes, IAB E-learning, active participation in hands-on team exercises, interactive group exercises, in-class and homework exercises, project based learning.

Pre-requisites:

Pre-intermediate level of English (B1)

Training outline and highlights:

- Project Management framework, project management processes and knowledge areas
- Project initiation, integration, scope and structural planning
- Project schedule management, planning and controlling
- Project cost planning and controlling
- Project risk management
- Project procurement management
- Project resource management
- Stakeholder management
- Project communications management
- Project quality management
- Code of ethics and professional conduct for project managers

Delivery style:

An interactive style, key concepts supported with examples, case studies, practical activities, real life projects.

Project Management Course (Agile Approach) - Part 2

This course geared toward project leaders and team members adapting to an agile approach in planning and executing projects. There is staunch support to use predictive approaches and conversely, passion around shifting to an agile mindset, values, and principles, this practice guide covers a practical approach to project agility. This practice guide represents a bridge to understanding the pathway from a predictive approach to an agile approach. Projects come in many shapes and there are a variety of ways to undertake them. Project teams need awareness of the characteristics and options available to select the approach most likely to be successful for the situation. It is important to note that all projects have these characteristics—no project is completely devoid of considerations around requirements, delivery, change, and goals. A project's inherent characteristics determine which life cycle is the best fit for that project. Another way to understand how project life cycles vary is by using a continuum ranging from predictive cycles on one end, to agile cycles on the other end, with more iterative or incremental cycles in the middle.

Based on the best and most current thinking in the field, particularly the Project Management Institute's PMI® methodology this course will provide participants with the knowledge and skills needed to perform in-depth analysis for a project during all phases. Participants will learn all the critical tools and techniques required to make decisions to optimize the successful execution of a project in a dynamic environment. It covers the foundational concepts of project management, including key terminology, an explanation of the project lifecycle, project constraints, an in-depth study of 49 project management processes, and 10 knowledge areas based on (PMBOK® Guide) 6-th edition

Target audience:

This course is intended for practicing project leaders, business managers and project team members who have passed part 1 level training.

Training outline and highlights:

- Introduction
- Agile, iterative, adaptive, and hybrid project environments
- Introduction to agile session
- Life cycle selection
- Creating an agile environment
- Delivering in an agile environment
- Organizational considerations for project agility
- Overview of agile and lean frameworks
- Overview of agile and lean frameworks
- Agile suitability filter tools

Delivery style:

- An interactive style
- Case studies, hands-on team exercises, and practical information reinforce the course material learning
- Business games that are conducted in mini-groups where trainees acquire practical skills in development of project documents, decision making, project performance analyzing and controlling

Course prerequisites: Pre-Intermediate level of English (B1), Project Management Courses - Part 1

Language of delivery/Materials: Armenian / English

Duration: 25 hours

Fee: 120 000 AMD (VAT included)

Venue: IAB International Academy of Business, 2A Agatangeghos Str., 2nd Floor

Start date: December 3 – End December 24 2018

Days/ Hours: will be announced

(PMP)® and (CAPM)® - Exam Preparation Course

Overview

With 45 of exam oriented classroom training supported by online learning module, which includes additional study materials, quizzes and mock tests, the course is designed for experienced project managers across organizations and industries looking forward to obtain PMI® (PMP)® or (CAPM)® credentials.

The course incorporates the Guide to the Project Management Body of Knowledge (PMBOK® Guide) 6-th edition and other sources, uses PMI® terminology and various exam tips.

Objectives

- Understand the project management framework and 10 knowledge areas of PMBOK® Guide 6-th edition and correlate them with the 49 processes of project management
- Discuss major themes and issues for each of the ten knowledge area
- Practice for the (PMP)® certification exam, exercises, tips, tricks and tools to help you understand and grasp the content of the exam
- Recognize the types of questions on the PMP exam
- Create more "best" answers, rather than just "right" answers
- Demonstrate an understanding of PMI's Project Management best practices
- Learn the PMI Code of Ethics and Professional Conduct
- Master the skills to successfully manage, execute, and deliver projects in line with global project management best practices

Target audience

Who should apply for (PMP)®

Experienced project managers looking to solidify their skills, stand out to employers and maximize their earning potentials.

Who should apply for (CAPM)®

Less experienced project practitioners looking to demonstrate their commitment to project management, improve their ability to manage larger projects and earn additional responsibility, and stand out to potential employers.
